Recommendation Letter

To whom it may concern,

In my quality of Assistant Professor in the National Institute of Applied Technology of Tunisia (INSAT), and the teacher of **Mrs. Ons Elleuch** for five years now, I am pleased to send you this recommendation letter for her application for a graduation internship.

I have known Ons as a highly skilled and motivated individual. As a professor of Computer science at INSAT University, I have instructed many students in the subject. However, Ons's willingness to learn and dedication to the field have stood out among her colleagues. I have had the pleasure of Ms. Ons's presence in two of my classes.

During different occasions, she demonstrated impressive technical skills and a true passion for change. I am not alone in this observation, in fact, Ons also impressed the organizers of "Promoting Female Talent", a program by the "Deutsche Gesellschaft für Internationale Zusammenarbeit" (GIZ) promoting young women with high potential, with whom I contributed as the director of the career center in INSAT.

Beyond her technical skills, Ons always tries to be active in her community and induce a positive impact. She is known in the Institute as one of the organizers of the Tunisian National Day of Robotics, the most well known robotics event in the country. Such an event is not easy to organize, but with her perseverance, she managed to make the best out of it.

This speaks for Ons' ability to work in and manage a team, cope with stressful and critical situations, and to her passion motivation to improve her community.

The missions entrusted to Ons taught her to be versatile and allowed her to develop her communication skills, her ability to adapt to new situations as well as her team spirit.

Dr. Lilia Sfaxi

*Assistant Professor,
Software Engineering Department INSAT
